<20% on social media

CityApp is a secure, ad-free messaging platform that connects municipalities with residents in real time — without the noise, misinformation, or algorithm bias of social media.

Communicate Directly. Privately.

Keep your community informed with direct real-time messaging with push notifications. Deliver crucial information directly to residents' mobile devices without requiring an user account fostering better engagement and a more connected and informed community.

Official Source of Truth

Become the single, verified voice for your city. When misinformation spreads on social platforms, residents know where to find accurate and truthful information.

Collaborate Efficiently. Everywhere.

Bring all the important voices in your city together with CityApp™. Our innovative platform allows city departments, boards and community partners to send professional and secure mobile messages directly to residents. Built-in message approval, message scheduling and desktop/browser notifications provide a smooth workflow for both communicators and content managers.

Customizable Engaging Experience

Access our secure, user-friendly web portal and manage users, send and manage messages and create custom channels and seamlessly link important online services and engagement opportunities. Integrate your CityApp™ message stream into your website with customizable copy and paste code. Enhance the experience for your residents by offering their choice of English or French language.

Seamless Experience

CityApp™ is designed for smooth transitions between CityApp™ communities. Users can switch effortlessly and receive messages instantly, ensuring a seamless and uninterrupted messaging experience wherever they go.
